

VPA-80 CAN CARRIER APPLICATOR

✓ Built to Run Craft-Pak® Versa

The VPA-80 applies our revolutionary 100% biodegradable* Craft-Pak® Versa can carriers, which offer up to 50% less plastic and up to 25% less cost than competitor carriers.

✓ Increased Throughput

Delivering speeds up to 80 cans per minute (CPM), the VPA-80 provides an efficient, high-speed upgrade that reduces bottlenecks and replaces manual application.

✓ Less Downtime

Compatible with 12, 16 and 19.2 oz. cans, no change parts are required to switch between 4- and 6-pack carriers, and only a simple height adjustment is needed when switching between can sizes.

✓ Smart Automation with Fewer Hands

The VPA-80 further minimizes labor requirements at pack-out. Needing only one operator (not two), it loads carriers, applies handles and packs trays for palletizing, allowing your team to stay focused on other tasks while maintaining canning line speed.

* We collaborated with an independent agency to conduct laboratory testing under controlled conditions that replicate an urban landfill environment. The rigorous 56-week scientific test demonstrated that our HDPE products completely degraded, without any false positives or false negatives.

✓ Configurable Layout

This reliable, well-supported system is designed to integrate seamlessly into your operation. The VPA-80 offers a small footprint and 90° left or right inline options to meet your configuration needs.

✓ Budget-Friendly, Built to Last

With a price point around \$11,500, the VPA-80 offers an affordable way for breweries to replace manual application. When paired with Craft-Pak® Versa carriers, it can deliver cost savings that result in ROI in as little as one year.

Ready to Upgrade Your Line?

CONNECT WITH OUR TEAM:

Whether you're looking to streamline labor requirements, replace an outdated applicator or improve line efficiency, the VPA-80 can applicator is a smart investment. Pair it with Craft-Pak® Versa for a sustainable, cost-saving packaging solution that performs.
